Absolute Return Index™

Index Overview
Absolute return strategies can invest in a broad range of asset classes, maintain both long and short positions, and/or use a diversified set of strategies. Managers of this category aim to generate consistent positive returns through market cycles regardless of the directional movements in equity and fixed income markets. Underlying strategies are either managed as a sub-sleeve of the overall portfolio or as a fund-of-fund (FoF) structure.

Objective
Establish an appropriate and representative baseline for measuring the performance of the liquid alternative strategies in Canada.

Key Features
- Designed to measure the performance of the liquid alternative universe that is increasingly popular, but difficult to track
- Constituents comprised of NI 81-102 alternative mutual funds
- Consists of 1) an overall index, 2) seven strategy-based indices, and 3) three goal-based indices
